Criterion 3: Evidence Search (RAG) in Simple Words

Where: Criterion 3 page → tab **AI Advisory & RAG** → box **Evidence Semantic Search** → type → click **Search**.

What it does

You type a question. The system looks inside the **text of the files you uploaded** and shows the best matching file, the page, and a piece of its text. Use it to answer: **"Which document proves this?"**

It only finds documents that are already uploaded. Upload the 8 files first.

What to type for each section

Section	Type this	You should see first
3.1 Course outcomes	`CO-PO mapping course outcomes`	`3.1_Course_File_CS501…pdf`
3.2 Question paper	`question paper Bloom level`	`3.2_SEE_Question_Paper…pdf`
3.3 Lab work	`lab experiments safety`	`3.3_Lab_Manual_and_Records…docx`
3.4 Internship	`internship duration companies`	`3.4_Internship_Summary…docx`
3.5 Projects	`project rubric team scores`	`3.5_Project_Evaluation_Sheet.xlsx`
3.6 SDG	`SDG zero hunger`	`3.6_SDG_Mapping_Report.docx`
3.7 CO attainment	`students meeting target attainment weak`	`3.7_CO_Attainment_Sheet.xlsx`
3.8 PO/PSO attainment	`PO PSO average level`	`3.8_PO_PSO_Attainment_Sheet.xlsx`

Each result shows: the **file name**, the **page**, a **Sim %** and a short piece of the text. (The best match is always shown as 100%. The other results are scored against it. It is a ranking, not a quality score.)

Tips

- Use words that are **really inside** the document (for example `Bloom`, `SDG`, `internship`). The search matches words, not meaning.
- Short is better: 2 to 4 words.
- If nothing sensible appears, the file is probably not uploaded yet. Check the **Evidence Documents** tab.

The other button: Assessment AI Agent Review

This button asks an AI to read the Criterion 3 data and write advice. **It needs a free Groq key.** Without one it shows: *“Assessment Agent Advisory (status: UNAVAILABLE) AI service returned HTTP 500.”* That message is expected until a key is added. The search above does **not** need the key. The AI advice never changes a score.
