AI-Driven NBA Accreditation Readiness System: How to Use and Verify It

1. What this system does, in one minute

NBA (National Board of Accreditation) will ask your department to **prove** its claims: faculty records, course files, CO attainment, research output, and the documents behind them. Normally that is a scramble of Excel files and folders the month before the visit.

This system keeps a live digital copy of the department (a “digital twin”) and checks it against the NBA rules **all year**:

COLLECT → STORE → CHECK → ANALYZE → FIX → PROVE

Step	What happens in the system
Collect	Faculty enter records (qualifications, publications, marks, attendance, course outcomes)
Store	Evidence documents (PDF, Word, Excel, CSV, text, images) are stored with context: who uploaded, which criterion, which requirement, which year
Check	The rule engine tests every requirement and gives **PASS / WARNING / FAIL** (or *Needs rule clarification* when a rule needs a decision from you)
Analyze	CO, PO and PSO attainment are calculated from marks; weak outcomes are flagged; at-risk students are listed
Fix	Gaps are created automatically; the HOD assigns corrective actions with owners and due dates
Prove	Reports (PDF, Excel) and the **Virtual NBA Inspection** summarise readiness with evidence status

> **Important.** The readiness percentage is your own **internal indicator**. It is not an official NBA score. The pass/fail logic is deterministic code, never an AI guess. AI is advisory only.

Scope of this build: Criteria **3, 4, 5 and 6** (Outcome-Based Assessment, Students’ Performance, Faculty Information, Faculty Contributions). Criteria 1, 2, 7, 8, 9 from the overview document are not built yet.

---

2. Start the system

What you need (all operating systems): Python 3.12 or newer, and PostgreSQL 14 or newer with the **pgvector** extension. No Docker is needed.

Windows (recommended path)

1. Install **Python** from python.org. Tick *Add python.exe to PATH*.
2. Install **PostgreSQL** from postgresql.org (the EDB installer). Remember the `postgres` password you choose. Add its `bin` folder (for example `C:\Program Files\PostgreSQL\17\bin`) to PATH so `psql` works.
3. Add **pgvector**. This is the one tricky step on Windows, because the PostgreSQL installer does not include it. Pick one:
    - **Easiest: a hosted free Postgres that already has pgvector** (Neon or Supabase). Create a database, copy its connection string into `DATABASE_URL` in `backend\.env`, done. Nothing to install.
    - **Local:** follow the "Windows" build steps in the pgvector README (https://github.com/pgvector/pgvector#windows). It needs Visual Studio Build Tools.
4. Create the database: `createdb -U postgres nba_readiness` (skip when using a hosted database).
5. In the project folder, open PowerShell:

```
.\start.ps1 setup
```

(or double-click / run `start.bat setup`). If PowerShell blocks the script, run once: `Set-ExecutionPolicy -Scope CurrentUser RemoteSigned`. 6. Next time, just run `.\start.ps1`. Three windows open (backend, AI service, website); close them to stop.

If your `postgres` password is not `changeme`, edit `DATABASE_URL` in `backend\.env` after the first run creates it, then run the script again.

Mac or Linux

```
brew install postgresql@17 pgvector && brew services start postgresql@17   # Mac
createdb nba_readiness
./start.sh setup      # first time
./start.sh            # after that
```

Then open **http://127.0.0.1:5500** in your browser.

> Use `127.0.0.1`, not `localhost`. If another program on your computer already uses port 8000 on `localhost`, the website would talk to the wrong server.

Service	Address	Purpose
Website	http://127.0.0.1:5500	What users see
Backend API	http://127.0.0.1:8000/docs	Interactive API documentation
AI service	http://127.0.0.1:8001	Optional AI agents
Database	port 5432 (or your DATABASE_URL)	PostgreSQL with pgvector (searchable document text)

Sample logins (all passwords `password123`)

Role	Email	Sees
Admin	admin@college.edu	Everything, plus users, years, backups
HOD	hod@college.edu	Readiness, approvals, gaps, inspection
Faculty	faculty1@college.edu … faculty6@college.edu	Own records, subjects, uploads

The first run also loads a **sample department** (Computer Science and Engineering, 2026-27): 6 faculty, 60 students, 5 subjects with course outcomes, marks, attendance, publications, patents and projects. It is deliberately imperfect (two weak subjects, a few failing requirements) so you can see the system find problems. Change the passwords before any real use.

---

3. Who can do what

Action	Faculty	HOD	Admin
Register an account (needs approval)	✔		
Approve or reject new users		✔	✔
Assign or remove the HOD role			✔
Create academic years, subjects, students, outcomes		✔	✔
Enter own faculty records (qualifications, publications, patents, projects…)	✔	✔	✔
Enter marks, attendance, course outcomes	✔	✔	✔

Action	Faculty	HOD	Admin
Upload evidence documents	✔	✔	✔
Link evidence to an NBA requirement		✔	✔
Run **Evaluate** on a requirement		✔	✔
Save manual inputs for a requirement		✔	✔
Generate gaps, assign corrective actions		✔	✔
Approve, reject, request revision on submissions		✔	✔
Override a submission decision			✔
Run the **Virtual NBA Inspection**		✔	✔
Download PDF/Excel reports	✔	✔	✔
Create, validate, restore backups			✔
Delete a document		✔	✔

---

4. The three dashboards, section by section

Each dashboard is a set of tabs. The tab names below are the real ones on screen. Tabs marked ⚠ were still being checked for sample (non-live) data when this guide was written; if a number looks round or never changes, treat it as unverified.

4.1 Admin dashboard (admin@college.edu)

Tab	What it is for	How to use it
Institution Overview (C3, C4, C5, C6) ⚠	One-page summary: departments, faculty, students, users, readiness by criterion	Look first; click a criterion card to open it
Pending Approvals	New faculty accounts waiting for approval	Approve or Reject; approved users can sign in
User Management & Roles	List of all users, status, roles	Activate/deactivate a user; **Assign HOD** or remove it

Tab	What it is for	How to use it
Audit Logs & Override History	Who approved, rejected or overrode what, and when	Read-only record for inspectors
Database Backups & Restore	Backup files	**Create**, then **Validate**, then Restore only if needed
System Configuration ⚠	Settings such as academic years	Create the academic year before anyone enters data

Sidebar: Criterion 3 to 6 pages (same pages the HOD uses), Inspection, Reports.

4.2 HOD dashboard (hod@college.edu)

Tab	What it is for	How to use it
Department Overview	Readiness from the digital twin and counts by status	Daily health check
Pending Approvals Queue	Items faculty submitted for approval	Approve, Reject or Request revision (with a comment)
Course Assignments (C3)	Which faculty teach which subjects	Assign a subject to a faculty member
Faculty Strength & SFR (C5)	Faculty count, qualifications, student-faculty ratio	Check against requirements 5.1 to 5.3
Students Performance (C4)	Pass rates, marks, attendance, at-risk students	Check against 4.3 to 4.5
Research & Contributions (C6)	Publications, patents, projects, consultancy	Check against 6.2.x
Gaps & Actions	Problems found and the fixes assigned	**Generate gaps**, then add an action with owner and due date
Department Analytics & SAR	Reports	Download PDF or Excel

Sidebar: Criterion 3 to 6 (Evaluate, Inputs, History), **Inspection** (Run Virtual NBA Inspection), Reports.

4.3 Faculty dashboard (faculty1@college.edu to faculty6@college.edu)

Tab	What it is for	How to use it
My Assigned Courses (C3)	Your subjects, course outcomes, marks	Add course outcomes and CO-PO mappings; enter marks
Assigned Students (C4)	Students in your courses, attendance	Enter attendance; see who needs support
My C5 Profile & FQI	Your qualifications, experience, certificates	Keep complete; feeds requirements 5.1 to 5.3
My C6 Research & Consultancy	Publications, patents, projects, FDPs, consultancy	Add each record; feeds 6.2.x

Tab	What it is for	How to use it
Evidence Upload & Lifecycle	Upload and replace evidence files	Choose file, criterion, year; use Replace for a new version
HOD Feedback & My Submissions	Status of what you submitted	Fix anything marked *revision requested* and resubmit

Bell icon: notifications such as assigned corrective actions.

---

5. Verify each criterion, step by step

Every requirement works the same way, so learn the pattern once.

5.0 The pattern (do this for any requirement)

1. Sign in as **HOD** (or Admin) and open the criterion page (for example **Criterion 5**).
2. Find the requirement row (for example *5.1 Student-Faculty Ratio*).
3. Click **Evaluate**. The system reads the stored records, runs the rule and shows:
    - the **status** (PASS / WARNING / FAIL / Needs rule clarification),
    - the **marks** it earned out of the maximum,
    - the **reason** in the limitations text.
4. If the reason says *missing context keys* or *must be entered by a reviewer*, click **Inputs**, fill in the listed fields, and **Save**. The row is re-evaluated immediately.
5. Click **History** to see every past evaluation. Nothing is overwritten.
6. Attach evidence: upload the document, then link it to the requirement. The requirement then counts as “has evidence”.
7. Open the **Inspection** page and run the inspection to see everything together.

How to prove the rule is real (not a mock): change the underlying data, evaluate again, and watch the status change. Each criterion below includes a “Try this” test for exactly that.

What the statuses mean

Status	Meaning	What to do
PASS	Meets the threshold	Keep evidence current
WARNING	Below full marks, or an input is missing	Read the reason; enter the missing input or improve the data
FAIL	Clearly below the expected level	A gap is created; assign a corrective action
Needs rule clarification	The NBA manual leaves a choice to your institution	Approve a method (see 3.7, 3.8) or record the decision
Not applicable	The requirement does not apply to this year	Nothing

5.1 Criterion 3: Outcome-Based Assessment (120 marks)

Question it answers: Did students actually learn what we said they would learn?

Req	What it checks	Where the data comes from
3.1 Continuous assessment	Subjects have course outcomes mapped to program outcomes	**Auto**: subjects, COs and CO-PO mappings you entered
3.2 SEE question papers	Quality of exam papers	**Inputs**: `reviewer_score` (HOD rubric score)
3.3 Laboratory work	Lab and workshop assessment quality	**Inputs**: `reviewer_score`
3.4 Industrial training	Internship assessment	**Inputs**: `reviewer_score`
3.5 Projects	Project evaluation quality	**Inputs**: `reviewer_score`
3.6 SDG	Sustainable Development Goal mapping	**Inputs**: `reviewer_score`
3.7 CO attainment	How well students met each CO	**Auto-calculated from marks**, then **HOD approves the method**
3.8 PO and PSO attainment	Roll-up of CO results into PO/PSO	**Auto-calculated**, then **HOD approves the method**

How CO, PO and PSO attainment is calculated

1. Faculty enter marks for each student and assessment.
2. A student **meets the target** when total marks ≥ **60%** of total maximum.
3. **CO attainment %** = students meeting the target ÷ students who appeared.
4. **Level**: 3 if ≥ 70%, 2 if ≥ 60%, 1 if ≥ 50%, otherwise 0.
5. A CO below **level 2** is **weak** and gets a recommended action (remedial teaching, reassessment, record new evidence).
6. **PO/PSO level** = average level of the mapped COs, weighted by the CO-PO correlation (1, 2 or 3).
7. Score out of 25 = average level ÷ 3 × 25.

Limits to know: assessments are not yet mapped to individual COs, so all COs of one subject share the subject's result. Survey-based (indirect) attainment is not blended in.

Try this (about 10 minutes)

1. **HOD → Criterion 3 → CO Attainment tab.** In the sample data, CS503 (Database Systems) shows about 32% (level 0) and CS504 about 55% (level 1). Both are flagged weak.
2. Click **Approve attainment method**. Requirements 3.7 and 3.8 move from *Needs rule clarification* to a real score.
3. Open **Inputs** on 3.2 and enter a reviewer score of 8. Evaluate: PASS, 8 of 10.
4. **Make the weakness disappear:** as Faculty, raise marks for CS503 students above 60%. Return to the CO Attainment tab: the weak flag clears and the score rises.
5. Run **Evaluate** on 3.7 again and open **History**: you will see both runs.

5.2 Criterion 4: Students' Performance (120 marks)

Question: How are our students performing?

Req	What it checks	Data
4.1 Enrolment ratio	Admitted vs sanctioned intake	**Inputs**: `years` list (N1, N4, N per year)
4.2 Success rate without backlogs	Batch completion	**Inputs**: `batches` list (A, B, N, N2)
4.3 / 4.4 / 4.5 Academic performance (1st, 2nd, 3rd year)	Mean performance from marks	**Auto** from student marks
4.6 Placement and higher studies	Needs institution decision	**Needs rule clarification** (the manual does not fix the formula)
4.7 Professional activities	Qualitative	**Inputs**: `reviewer_score`

At-risk students: *Criterion 4 → Students* lists students with average attendance below 75% or overall marks below 40%. These are deterministic indicators with the reason shown, not an AI opinion.

Try this

1. Enter student marks as Faculty (or use the sample data). Evaluate 4.3: marks come from the average.
2. Lower a few students' attendance below 75%: the at-risk list grows and shows the reason.
3. Open **Inputs** on 4.1 and enter, for example, `[{"N1": 60, "N4": 60, "N": 66}]`. Evaluate and see the ratio-based score.

5.3 Criterion 5: Faculty Information (100 marks)

Question: Do we have enough qualified faculty?

This criterion is almost fully **automatic**, from faculty profiles and qualifications.

Req	Marks	What it checks	Data
5.1 Student-faculty ratio	30	Students ÷ faculty, banded (under 15 gives full marks)	**Auto**
5.2 Faculty qualification index	25	Ph.D. and M.Tech count against required faculty (students ÷ 20)	**Auto**
5.3 Faculty cadre proportion	25	Professors, associate and assistant professors vs the expected 1 : 2 : 6 split	**Auto**
5.4 Visiting/adjunct faculty	10	Provision exists and 50+ hours per year	**Inputs**: `provision_exists`, `yearly_hours`
5.5 Faculty retention	10	Retained faculty by cadre	Needs rule clarification (boundary decision)

Try this

1. Open **Faculty** → **My Profile** as faculty1 and note the designation and qualification.
2. As HOD, Evaluate 5.1: with 60 students and 6 faculty the ratio is 10 : 1, so full marks.
3. As Admin, approve a new faculty registration, then Evaluate 5.1 and 5.2 again: the ratio and qualification index change.
4. Change a professor's designation to Assistant Professor and Evaluate 5.3: the cadre score drops.

5.4 Criterion 6: Faculty Contributions (120 marks)

Question: What are our faculty contributing? (Criterion 5 asks who the faculty are; Criterion 6 asks what they do.)

Req	Marks	Data
6.1.1 Professional society memberships	5	**Inputs**: `reviewer_score`
6.1.2.1 Resource persons invited	5	**Inputs**: `yearly_count`
6.1.2.2 FDP/STTP participation	5	**Inputs**: `yearly_attendances`
6.1.3 MOOCs developed	7	**Inputs**: `reviewer_score`
6.1.4 MOOC certification by students	8	**Inputs**: `certified_students`, `total_students`
6.1.5 FDPs organised	10	**Inputs**: `programs` list
6.1.6 Student innovation support	10	**Inputs**: `participating_students`, `total_students`
6.1.7 Industry training for students	10	**Inputs**: `trained_students`, `total_students`
6.2.1 Research publications	10	**Auto** from faculty publications (a quality score may be asked)
6.2.2 PhD students guided	5	**Inputs**: `enrolled_count`, `graduated_count`
6.2.3 Patents and prototypes	10	**Auto** from faculty patents (granted or published)
6.2.4 Sponsored research	15	**Auto** from faculty projects (grant amount)
6.2.5 Consultancy	15	**Auto** from faculty consultancy (financial outlay)
6.2.6 Seed money	5	**Inputs**: received and utilised amounts

Try this

1. As faculty1, add a publication under **Faculty** → **Publications**. As HOD, Evaluate 6.2.1: the count goes up.
2. Add a patent with status *Granted*. Evaluate 6.2.3: marks increase.
3. Add a sponsored project with a grant amount. Evaluate 6.2.4.
4. Upload an FDP certificate and link it to 6.1.2.2 (section 6 below), then enter `yearly_attendances` in **Inputs**.

---

6. Upload documents and attach evidence

Accepted files: PDF, Word (.docx), Excel (.xlsx), CSV, plain text, PNG, JPEG. Maximum 25 MB. The file type is checked from the file's real content, not its name. Scanned PDFs and images are read with OCR when Tesseract is installed.

Faculty (uploading):

1. Open **Faculty** → **Documents** (or the **Upload evidence** button on a criterion page).
2. Choose the file, give it a title, pick the **criterion** and the **academic year**.
3. Click **Upload**. The system fingerprints it (duplicate detection), stores it, extracts its text and indexes it for search.

HOD or Admin (linking to proof):

1. Open the requirement on its criterion page.
2. Click **Evidence** → **Link document** and choose the uploaded file. Add a one-line note such as *FDP attendance proof*.
3. The requirement now shows **Has evidence**.

Replacing a document: use **Replace** to upload a new version; the old version stays in **History**.

Search your evidence: the AI assistant and the `Analysis → retrieve` function search document text by meaning, so "What evidence do we have for FDP duration?" finds the certificate, with the document name and page.

Evidence status

Status	Meaning
Linked	A document is attached to the requirement
Missing	Nothing is attached (counted as *Missing evidence* in the inspection)
Processed	Text was extracted and indexed
Needs review	Extraction partial (for example a scan without OCR)

---

7. Find gaps, assign fixes, track them

1. **HOD → Gaps → Generate gaps.** Every FAIL, WARNING or missing-evidence requirement becomes a gap with a severity. Gaps are never duplicated; a gap that now passes is closed automatically.
2. Open a gap and click **Add action**. Enter a title, an owner (a faculty member), a priority and a **due date**.
3. The owner is notified (bell icon). They do the work, upload evidence, and mark the action **Completed** with a note.
4. Late actions appear under **Overdue actions**.
5. Re-run **Evaluate** or the inspection. A fixed requirement turns PASS and its gap closes.

This is the improvement chain the NBA wants to see: **Problem → Action → Responsible person → Deadline → Evidence → Result.**

---

8. The Virtual NBA Inspection

Open **Inspection** in the HOD or Admin sidebar and click **Run Virtual NBA Inspection**.

The system evaluates **every** requirement of Criteria 3 to 6 from your current records and saved inputs, refreshes the gaps, then shows:

- **PASS / WARNING / FAIL** counts and requirements that *need more input*,
- **Missing evidence**, **Pending actions**, **Overdue actions**,
- **Overall readiness %**, marks earned out of marks available,
- a **per-criterion table**,
- a **findings list**: for each non-passing requirement, the issue and the recommended action.

Readiness label: **READY** (at least 85% and no failures), **NEARLY READY** (60–84%), **NOT READY** (below 60%).

Each run is stored as evaluation history, so you can compare today with last month.

First-time expectation: on an empty department the answer is *NOT READY, 0%*. That is the honest result. Enter data, add inputs, attach evidence, and watch it climb.

---

9. Reports

Reports page → choose department and year → **Download PDF** or **Download Excel**. Both are produced from the same stored records and evaluations as the dashboards, so numbers always agree. The report states clearly that readiness is an internal indicator.

---

10. Admin tasks

- **Approve new users:** *Admin → Pending approvals*. New faculty cannot sign in until approved.
- **Make someone HOD:** *User management → Assign HOD*.
- **Academic years:** create the year before entering data for it; one year is active at a time.
- **Backups:** *Backups → Create backup*, then **Validate**. **Restore** replaces current data, so validate first. Keep backups outside the document folder.
- **Audit log:** every approval, override and rejection is recorded with who and when.

---

11. A complete 30-minute walkthrough

1. Run `.\\start.ps1 setup` (Windows) or `./start.sh setup` (Mac/Linux). Open http://127.0.0.1:5500.
2. Sign in as **HOD**. Open **Inspection** and run it. Note the score and the findings.
3. Open **Criterion 5**, Evaluate 5.1, 5.2, 5.3. Read the marks and reasons.
4. Open **Criterion 3 → CO Attainment**. Spot the weak COs. Approve the attainment method.
5. Open **Inputs** on 3.2 to 3.6 and enter reviewer scores.
6. Sign out. Sign in as **faculty1**. Add a publication and upload an FDP certificate.
7. Sign in as HOD again. Link the certificate to 6.1.2.2. Evaluate 6.2.1.
8. **Gaps → Generate gaps.** Assign an action to a faculty member with a due date.
9. Run the **Inspection** again. The score is higher and the findings list is shorter.
10. Download the **PDF report**.

---

12. Troubleshooting

Problem	Fix
Page loads but data is empty or login fails	Open the site as `127.0.0.1:5500`, not `localhost`
“Failed to fetch”	Check the backend runs: open http://127.0.0.1:8000/api/v1/health
Database errors	Make sure PostgreSQL is running and `DATABASE_URL` in `backend/.env` is correct; `psql "$DATABASE_URL" -c 'select 1'` should work
New faculty cannot sign in	An admin or HOD must approve them first
Evaluate says *missing context keys*	Click **Inputs** and fill the listed fields
Upload rejected	Use PDF, DOCX, XLSX, CSV, TXT, PNG or JPEG under 25 MB; renamed files are caught
3.7 / 3.8 show *Needs rule clarification*	HOD must click **Approve attainment method**

Problem	Fix
AI answers unavailable	Optional: set `GROQ_API_KEY` for the AI service. All scoring works without it

---

13. What is not built yet (honest list)

- Criteria 1, 2, 7, 8 and 9 (curriculum, teaching, facilities, continuous improvement, governance) and the lab/equipment, placement and IQAC modules.
- Mapping of individual assessment questions to individual COs (needed for per-CO precision).
- Placement and higher-studies formula (4.6): the manual leaves it to the institution.
- Faculty retention (5.5) boundary decision.
- Automatic document verification (name match, date validity) beyond text extraction and search.
- Single sign-on, e-mail notifications, S3/MinIO storage (files are stored locally).
